

CAR:LINKTM

Remote Access Set up & Device Activation Guide

ATTENTION

If installing the CL6 (ASCL6) with any one of the VOXX Brands (Prestige, Pursuit, Or Code Alarm) the Alarm/Remote start module must be updated to the latest firmware version. This will require the VOXX USB updating cable, Part# VEPROG.

Prestige/Pursuit: Please visit www.veprog.com to update to the latest firmware version.

Code Alarm: Please visit www.voxxuniversity.com to download the CA Utility APP. The APP can be found in the VOXXTECH section of the website.

COMPATIBLE SYSTEMS

Prestige/Pursuit: All E models w/ telematics port (Except PRO9233E)

Code Alarm: CASECRS, CARS & CA4555

Flash Logic: All FLRS remote start modules including FLCAN (RS Firmware w/ adapter)

Omega: All modules with telematics port

**9 AM – 6 PM (EST - Eastern)
Monday – Friday**

Welcome to the CarLink 6 (CL6) set up and activation guide. Device set up preformed from a mobile device via the CL6 mobile application.

The same CL6 app (iOS & Android) is used by the installer and the user.

Please follow the directions below to begin setting up, testing and releasing the users device:

NOTE: The user can download and create their account prior to the device set up.

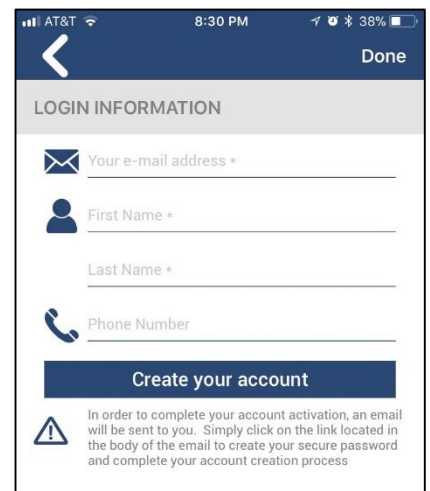

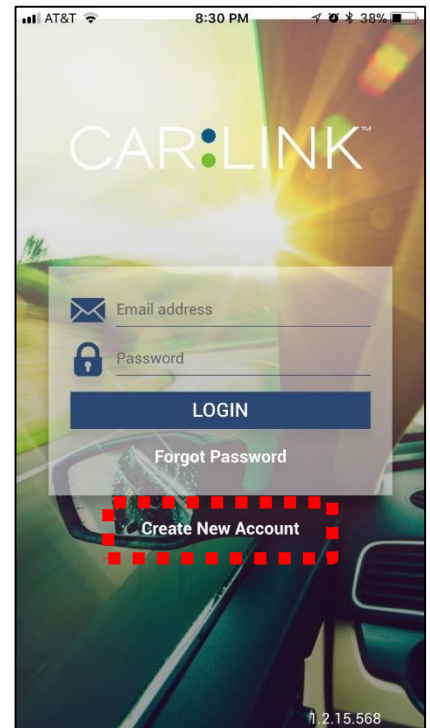

1. Download the “CL6” mobile app
2. Create an account via the mobile app
3. Fill out the required information to create an account

NOTE: This account can be used for future installations & set ups.

CL6 Mobile App

CL6
Automobility
Everyone

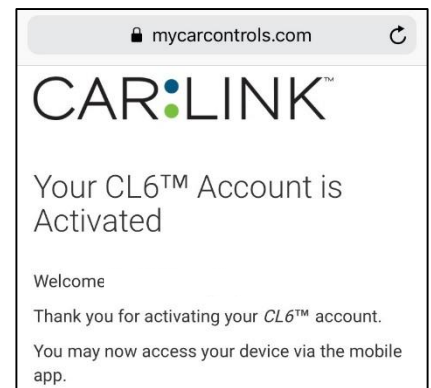

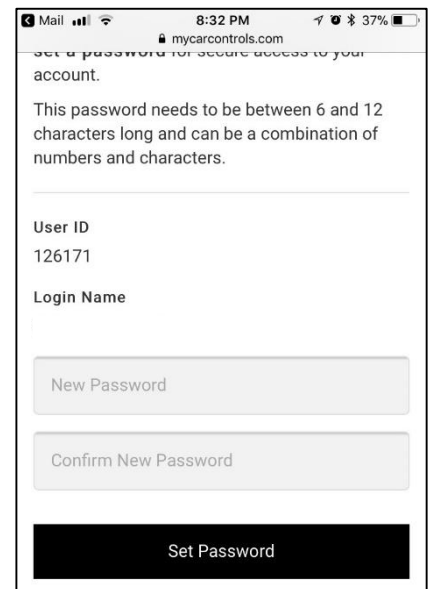

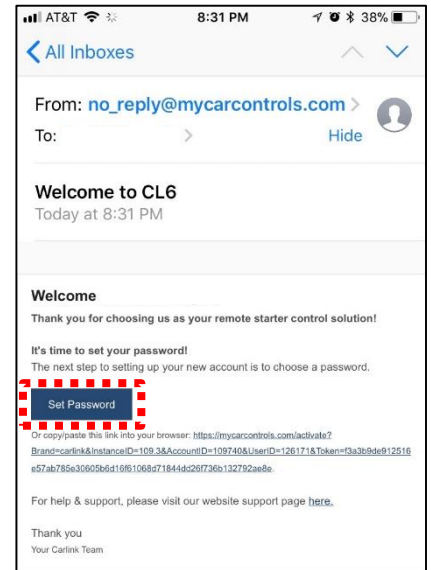

4. A 'Welcome Email' will be sent to the email registered to the CL6 account
5. Click 'Set Password' in the welcome email
6. You will be re-directed to a page to create a password for your account

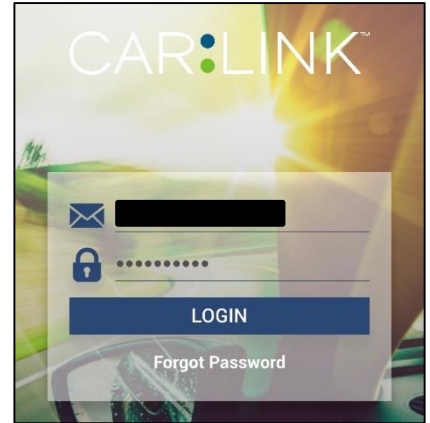

NOTE: Here you can view your login name and User ID.

7. Once your password has been set, you will be directed to the activation confirmation page – navigate back to the CL6 app

Example Welcome Email

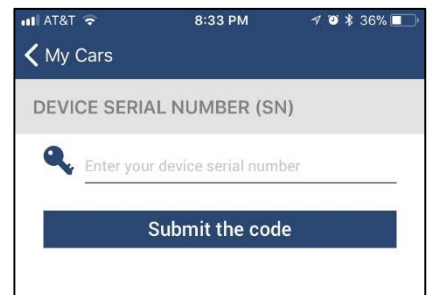

8. Open the CL6 app and log in with your newly created credentials

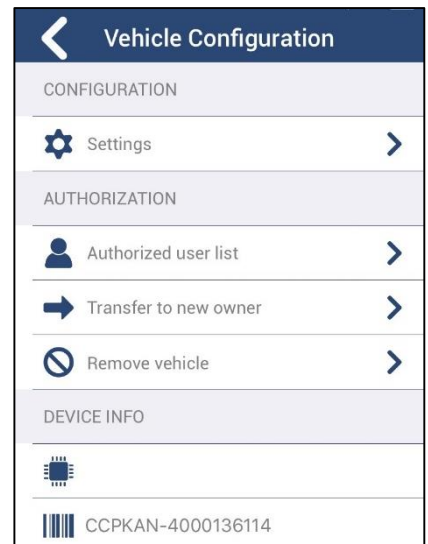

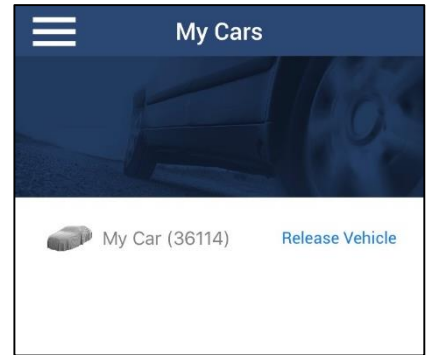

9. Once logged in, tap the '+' symbol in the bottom right corner to add a vehicle

10. Enter the device's serial number (reference the sticker on the device or extra stickers in packaging)

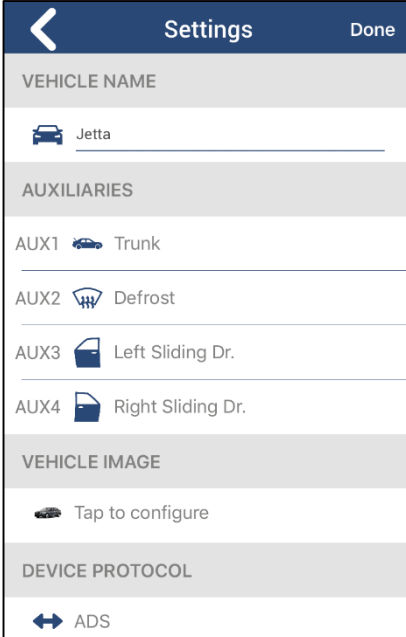

11. Once the serial number is submitted, the vehicle profile will be listed in the 'My Cars' section of the app – the device is now in set up mode
12. Tap on the new vehicle under My Cars to configure the device protocol and vehicle information
13. Click the 'Gear' icon in the top right corner to enter vehicle configuration

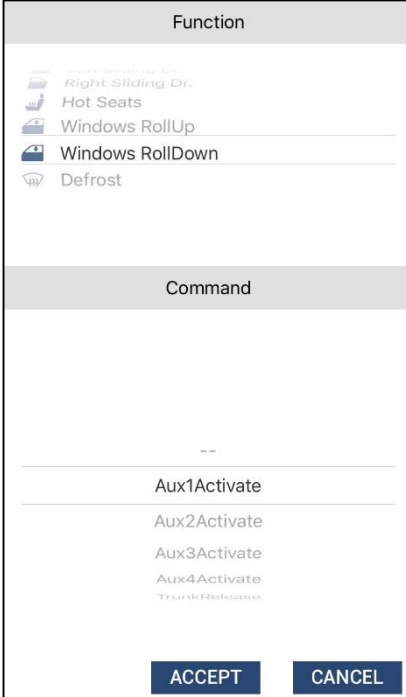

14. Click 'Settings' in the vehicle configuration menu to set the device protocol, vehicle image, AUX settings (and icons) and the vehicle name

NOTE: This information can be adjusted by the user and is not permanently set.

15. All AUX controls need to be customized – configure the AUX output to the function it controls
16. Set up the vehicle information and image by tapping 'Tap to configure' in the Vehicle Configuration section

The screenshot shows the 'Settings' menu with a back arrow on the left and 'Done' on the right. The menu is organized into sections: 'VEHICLE NAME' with a car icon and the text 'Jetta'; 'AUXILIARIES' with four entries: 'AUX1' with a car icon and 'Trunk', 'AUX2' with a defrost icon and 'Defrost', 'AUX3' with a sliding door icon and 'Left Sliding Dr.', and 'AUX4' with a sliding door icon and 'Right Sliding Dr.'; 'VEHICLE IMAGE' with a car icon and 'Tap to configure'; and 'DEVICE PROTOCOL' with a double-headed arrow icon and 'ADS'.

The screenshot shows a configuration screen with two main sections: 'Function' and 'Command'. The 'Function' section lists five options with icons: 'Right Sliding Dr.' (sliding door), 'Hot Seats' (car seat), 'Windows RollUp' (window), 'Windows RollDown' (window), and 'Defrost' (defrost). The 'Command' section is currently empty. At the bottom, there are two buttons: 'ACCEPT' and 'CANCEL'.

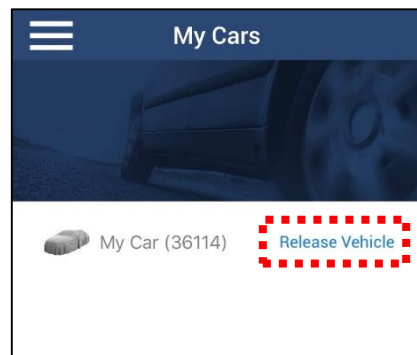

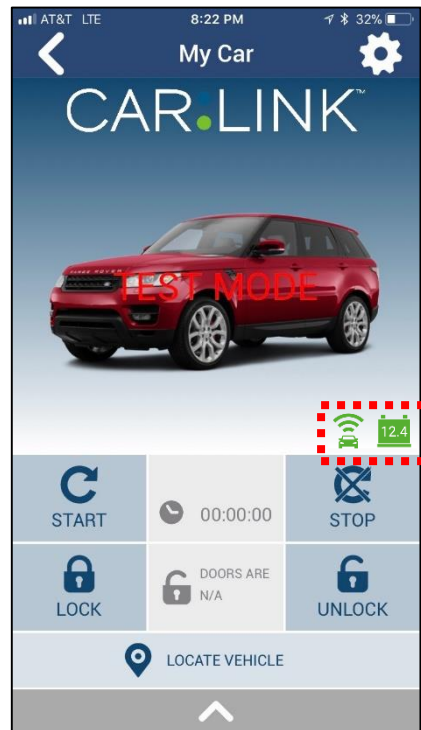

17. Once the set up is complete, the vehicle image will be displayed and the remote access features can be tested

NOTE: You can verify if the device is connected via the app. Check the connection icon, next to the battery icon, to check signal strength.

18. After the features are tested, you need to tap 'Release Vehicle' in the My Cars section – **instruct the user to add the device through the app with the device's serial number**

NOTE: A released vehicle will only be available for 24 hours. If the user does not add it within that time, it will need to be released again.

19. ASCL6 set up and activation complete
